Gross domestic product is arguably the best-known statistic in the contemporary world, and certainly amongst the most powerful. It drives government policy

File Type PDF

Chapter 12

and sets priorities in a variety of vital social fields - from schooling to healthcare. Yet for perhaps the first time since it was invented in the 1930s, this popular icon of economic growth has come to be regarded by a wide range of people as a 'problem'. After all, does our

File Type PDF

Chapter 12

Quality of life really improve when our economy grows 2 or 3 per cent? Can we continue to sacrifice the environment to safeguard a vision of the world based on the illusion of infinite economic growth? Lorenzo Fioramonti takes apart the 'content' of GDP - what it measures,

File Type PDF

Chapter 12

what it doesn't and why - and reveals the powerful political interests that have allowed it to dominate today's economies. In doing so, he demonstrates just how little relevance GDP has to moral principles such as equity, social justice and redistribution, and

File Type PDF

Chapter 12

shows that an alternative is possible, as evinced by the 'de-growth' movement and initiatives such as transition towns. A startling insight into the politics of a number that has come to dominate our everyday lives.

The 1993 SNA

Page 43/51

represents a major advance in national accounting. While updating and clarifying the 1968 SNA, the 1993 SNA provides the basis for improving compilation of national accounts statistics, promoting integration of economic and related statistics, and

File Type PDF

Chapter 12

enhancing analysis of economic developments. The 1993 SNA deals more clearly with relationships between economic flows (such as production, income, savings, accumulation, and financing) and links between these flows and stocks. At the

same time the 1993

SNA reflects the many significant developments that have taken place in financial markets and completes the integration of balance sheets into the system. The 1993 SNA also suggests how satellite accounts (e.g. environmental

accounts) and alternative classifications (e.g., through social accounting matrices) can be used to augment the central framework of the system.
