Swaps Work

An interest rate swap is

File Type PDF

Interest Rate

Swaps are contracts between two parties to exchange all future interest rate payments forthcoming from a bond or loan. It's between corporations, banks, or investors.

Swaps are derivative contracts. The value of the swap is derived from the underlying value of the two streams of interest payments.

The easiest way to see how companies can use swaps to manage risks is to follow a simple example using interest-rate swaps, the most common form of swaps.

Company A owns \$1,000,000 in fixed rate bonds earning 5 percent annually, which is \$50,000 in cash flows each year.

Interest Rate

Derivatives vs. Swaps:

What's the Difference?

The financial contract used in an interest rate

swap is a "derivative"

because it derives its value from an

underlying asset. Note:

Interest rate swaps and bond futures are both examples of derivatives.

Whereas bond futures derive value from the bonds, interest rate
