The main goals in any forensic skeletal analysis are to answer who is the person represented (individualization), how that person died (trauma/pathology) and when that person died (the postmortem interval or PMI). The analyses necessary to generate the biological profile include the determination of human, nonhuman or nonosseous origin, the minimum number of individuals represented, age at death, sex, stature, ancestry, perimortem trauma, antemortem trauma, osseous pathology, odontology, and taphonomic effects—the postmortem modifications to a set of remains. The Manual of Forensic Taphonomy, Second Edition covers fundamental principles of these postmortem changes encountered during case analysis. Taphonomic processes can be highly destructive and subtract information from bones regarding their utility in determining other aspects of the biological profile, but they also can add information regarding the entire postmortem history of the remains and the relative timing of these effects. The taphonomic analyses outlined provide guidance on how to separate natural agencies from human-caused trauma. These analyses are also performed in conjunction with the field processing of recovery scenes and the interpretation of the site formation and their postdepositional history. The individual chapters categorize these alterations to skeletal remains, illustrate and explain their significance, and demonstrate differential diagnosis among them. Such observations may then be combined into higher-order patterns to aid forensic investigators in determining what happened to those remains in the interval from death to analysis, including the environment(s) in which the remains were deposited, including buried, terrestrial surface, marine, freshwater, or cultural contexts. Features Provides nearly 300 full-color illustrations of both common and rare taphonomic effects to bones, derived from actual forensic cases. • Presents new research including experimentation on recovery rates during surface search, timing of marine alterations, trophy skulls, taphonomic laboratory and field methods, laws regarding the relative timing of taphonomic effects, reptile taphonomy, human decomposition, and microscopic alterations by invertebrates to bones. • Explains and illustrates common taphonomic effects and clarifies standard terminology for uniformity and usage within in the field. While the book is primarily focused upon large vertebrate and specifically human skeletal remains, it effectively synthesizes data from human, ethnological, geological/paleontological, paleoanthropological, archaeological artifactual, and zooarchaeological studies. Since these taphonomic processes affect other vertebrates in similar manners, The Manual of Forensic Taphonomy, Second Edition will be invaluable to a broad set of forensic and investigative disciplines.

Leonard Bloomfield (1887-1949) was one of the greatest linguists of the twentieth century. He devoted his entire life to a thorough-going study of language, its structure and its use, summed up in masterly fashion in his book Language (1933). After his premature death at the age of 62, his work was at first acclaimed as an exemplary application of the scientific method to linguistics, but then fell into unjustified neglect. Now that the centenary of his birth has passed, the time has come for the story of Bloomfield's life and work to be recounted in a biography. Accordingly, basing his discussion on all available materials (including some information not accessible until recently), Professor Hall has presented Bloomfield's life history in its intellectual and cultural setting. This book is not only a biography, but also a personal memoir, in which Hall draws on his contacts with Bloomfield, who was his teacher at Chicago and a senior colleague at Yale. There emerges from this study a fuller picture than we have had heretofore, presenting both Bloomfield's recognized achievement in establishing the study of language as a scientific discipline, and the less-known aspects of his character and of his personal life, which in certain respects was very tragic and sad.
