Handling COVID-19 in the future should be more interventionist like this. It should be more akin to living with norovirus than the flu. In the meantime, we have developed some good hygiene habits ...

We should treat COVID like norovirus—not the flu

Some healthcare professionals have taken on a role more akin to criminal prosecutors as they question women and girls about their conduct, not just their medical needs, seeking evidence of ...

This book addresses neoplasms of the human trophoblast. The scant literature available on the epidemiology of trophoblast neoplasms suggests that they are as much as ten times more common in Africa, Asia, India, and much of the developing world than in Western countries. The stimulus for the book evolved out of a common interest to combine Western technology with the clinical experience in the developing world in a common pursuit of the study and eradication of trophoblast neoplasia. There is substantial evidence to contend that gene derepression as seen in trophoblastic disease may be a universal prerequisite to neoplastic transformation in general. The recent discovery that the tumor markers, human chorionic gonadotropin (hCG) or its subunits, are identifiable in over 90 percent of all extracted neoplasms suggests a critical role for this common denominator of gene derepression in neoplasia. This gene derepression concept in reproductive biology and neoplasia spans many of the basic parameters of human cell replication as related to endocrinology, immunology, biochemistry, electrophysiol ogy, genetics, and pharmacology. The International Society for the Study of Trophoblastic Disease focuses on the global aspects of trophoblast neoplasms. These global aspects include epidemiology and etiology of the disease, regional variations in treatment of trophoblastic neoplasms, and potential ways to adapt and apply Western technology to effective use in developing countries. It was this perspective that formed the basis for the First World Congress on Trophoblast Neoplasms, which convened in Nairobi in October, 1982.

Essentials for practice of medicine in the frontline is an abridged synthesis of selected topics from family medicine, internal medicine, pediatrics, obstetrics and gynecology, pathology, and psychiatry; also, ophthalmology, otorhinolaryngology, hematology, and dermatology. Each section covers ten salient and commonly-encountered areas of practice by physicians. Multiple-choice questions and answers accompany each Section. The setting of writing is a developing country. The contents are relevant to doctors who practice in the medically advanced countries and those in the developing countries. Medically, the world has become an interesting place. Air travel, frequent movement, and resettlement of people now mean that doctors in developed countries can no longer stay and practice within the clinical conditions that were typical in their practice settings. Things have changed, as they cannot be certain of what medical conditions that patients from various parts of the world will present to them. Doctors also cannot be unequivocal that an emergency in a distant part of the globe may not require their attention. This book therefore meets the needs of doctors, irrespective of their length of practice or where they practice. What applies to doctors certainly applies to medical students. This book is an atypical book as it puts in its two volumes of less than 500 pages of 8.5" x 11" per volume material that any doctor, anywhere, should keep on their office or consulting room bookshelf. The e-book version is also a veritable companion.

The Oxford Textbook of Obstetrics and Gynaecology is an up-to-date, objective and readable text that covers the full speciality of Obstetrics and Gynaecology. This comprehensive and rigorously referenced textbook will be a vital resource in print and online for all practising clinicians. Edited by a team of four leading figures in the field, whose clinical and scientific backgrounds collectively cover the whole spectrum of Obstetrics and Gynaecology with particular expertise in fetomaternal medicine and obstetrics, gynaecological oncology, urogynaecology, and reproductive medicine, the textbook helps inform and promote evidence-based practice and improve clinical outcomes worldwide across all facets of the discipline. The editors are supported by contributors who are internationally renowned specialists and ensure high quality and global perspective to the work. Larger sections on the Basics in Obstetrics and Gynaecology, Fetomaternal medicine, Management of Labour, Gynaecological problems, Gynaecological oncology are complimented by specialist sections on areas such as Neonatal Care & Neonatal Problems, Reproductive medicine, and Urogynaecology and Pelvic Floor Disorders to name a few. The evidence-based presentation of current diagnostic and therapeutic methods is complemented in the text by numerous treatment algorithms, giving the reader the knowledge and tools needed for effective clinical practice. The Oxford Textbook of Obstetrics and Gynaecology is essential reading for specialist obstetricians and gynaecologists, subspecialists, and O&G trainees across the world.

Contains the names of medical practitioners registered with the General Medical Council of Great Britain. Data includes name and date of registration, address, registered qualifications, and registration number. Also includes information on the Council, registration statistics, and registrable qualifications granted in the United Kingdom, the Republic of Ireland, in member states of the European Economic Community, and recognized overseas (selected British Commonwealth) qualifications.

Reproductive tract infections (RTIs) have become a silent epidemic that is devastating women's lives. Each year, thousands of women die needlessly from the consequences of these infections, including cervical cancer, ectopic pregnancy, acute and chronic infections of the uterus and the fallopian tubes, and puerperal infections. For many women, this happens because they receive medical attention too late, if at all. The terrible irony of this tragedy is that early diagnosis of and treatment for many RTIs do not require high-technology health care. For the hundreds of millions of women with chronic RTIs acquired from their sexual partners, life can become a living hell. Infection is a major cause of infertility, and it leads to scorn and rejection in many countries. These women may experience constant pain, have festering lesions of the genital tract, be at enhanced risk of second ary diseases, and endure social ostracism. The problems associated with RTIs have grown even greater in the past decade with the emergence of human immunodeficiency virus (HIV) and AIDS. Preexisting sexually transmitted disease, particularly when associated with genital tract ulcers, raises women's vulnerability to the transmission of HIV 3-5 fold.
