Concussion -- the biggest name in today's high-impact sports. As more and more high profile athletes come forward to share their stories of invisible suffering after head injuries, we as a culture are finally acknowledging this silent epidemic. The Concussion Repair Manual is written as a user's guide for those suffering after head traumas and those that support them. It is one-part "textbook," packed with the leading research on medical technologies for healing the injured brain, and one-part "workbook," offering a step-by-step method for making and tracking a personalized recovery regimen. Dr. Dan Engle's background and passion for concussion repair stem from a three-decade investigation into the many modalities for healing his own traumas. When the usual medical treatments didn't help, he explored what was possible, found what worked and put them into this manual - "the best of the best" in the medical arena for recovering from sports related head injury.

The Manual focuses on the fieldside diagnosis and treatment of severe injuries and illnesses that can present at a sports event. It concentrates on basic diagnostic skills and treatment modalities as the sports physician has often limited diagnostic and treatment facilities available. Each chapter concentrates on an illness or anatomical injury and offers a structured diagnostic and therapeutic approach in this difficult pre-hospital environment. The chapters explain what problems are to be expected with specific conditions as well as which treatment plan should be implemented and how to evaluate and reassess those plans.

In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music, video, gaming, media, digital and mobile entertainment issues and trends.
