'Most cosmic civilizations long for things, in the depths of their souls, they would never openly admit to . . . ' In the strange, surreal world of The Cyberiad, outlandish events abound- two ingenious 'constructors' travel through a medieval universe offering their technical expertise; a machine capable of creating anything that starts with the letter 'N' meets an untimely end; kings oppress their people with parlour games; and PhD pirates demand ransom in knowledge rather than gold. It is a world where UFOs land silently on lawns at dawn, and where even the stars can be re-arranged for advertising purposes. In these fantastical short stories, Stanislaw Lem rewrites the laws of reality, space and language itself to take us on an anarchic and darkly comic journey through a newly imagined universe. With an introduction by Christopher Priest 'A Jorge Luis Borges for the Space Age.' The New York Times

"Lem has an almost Dickensian genius for vividly realizing the tragedy and comedy of future machines." -The New York Times Book Review These are the stories of Trurl and Klapaucius, master inventors and engineers known as "constructors," who have created marvels for kingdoms. Friends and rivals, they are constantly outdoing and challenging each other to reveal the next great evolution in cybernetics, and the exploits of these brilliant men are nothing short of incredible. From tales of love, in which a robotic prince must woo a robotic princess enchanted by pleasures of true flesh, to epics of battle, in which the heroic constructors must use their considerable wit to outsmart a monarch obsessed with hunting, to examinations of humanity, wherein Trurl and Klapaucius must confront the limits of their skills and the meaning of true perfection, these stories are rich with profound questions, unimaginable marvels, and remarkable feats. Hailed as "the most completely successful of [Lem's] books," The Cyberiad is an outrageously funny and incomparably wise collection of short stories, taking an insightful look at mechanics, technology, invention, and human ambition (The Boston Globe).

corners of the cosmos to take on freelance problem-solving jobs, with dire consequences for their employers.

Trurl and Klaupacius are constructor robots who try to out-invent each other. They travel to the far corners of the cosmos to take on freelance problem-solving jobs, with dire consequences for their employers. "The most completely successful of his books... here Lem comes closest to inventing a real universe" (Boston Globe). Illustrations by Daniel Mr-z. Translated by Michael Kandel.

These fourteen science fiction stories reveal Lem's fascination with artificial intelligence and demonstrate just how surprisingly human sentient machines can be. "Astonishing is not too strong a word for these tales" (Wall Street Journal). Translated and with an Introduction by Michael Kandel.

"A stunningly inventive fantasy about cosmic travel" from the Kafka Prize-winning author of Solaris (The New York Times). The Hermes explorer ship represents the epitome of Earth's excellence: a peaceful mission sent forth to make first contact with an alien civilization, and to use the expansive space technology developed by humanity to seek new worlds, friendships, and alliances. But what its crew discovers on the planet Quinta is nothing like they had hoped. Locked in a seemingly endless cold war among themselves, the Quintans are uncommunicative and violent, refusing any discourse—except for the firing of deadly weapons. The crew of the Hermes is determined to accomplish what they had set out to do. But the cost of learning the secrets hidden on the silent surface of Quinta may be grave. Stark, startling, and insightful, Fiasco has been praised by Publishers Weekly as "one of Lem's best novels." It is classic, thought-provoking hard science fiction, as prescient today as when it was first written.

In The Lem Reader, Peter Swirski has assembled an in-depth and insightful collection of writings by and about, and interviews with, one of the most fascinating writers of the twentieth century.

Leading scholars examine the social and cultural significance of technology and science in the work of Stanislaw Lem, the author of Solaris.
