Petroleum reservoir fluid properties. The geologic time spiral. Petroleum reservoirs may contain any of the three fluid phases—water (brine), oil, or gas. The initial distribution of phases depends on depth, temperature, pressure, composition, historical migration, type of geological trap, and reservoir heterogeneity (that is, varying rock properties).

In petroleum production, reservoir engineers use these properties in
reservoir simulation to calculate rate of oil production. Physical
properties are state functions and for every fluid depend on
temperature, pressure and composition of the mixture.
