Urban economics is broadly the economic study of urban areas; as such, it involves using the tools of economics to analyze urban issues such as crime, education, public transit, housing, and local government finance. More specifically, it is a branch of microeconomics that studies urban spatial structure and the location of households and

The field of urban economics is built on an analysis of housing prices, land rents, housing consumption, spatial form, and other aspects of urban residential structure. Drawing on the journal publications and teaching notes of Professor John Yinger of Syracuse University, *Housing and Commuting: The Theory of Urban Residential Structure* presents a simple model of urban residential structure and shows how the model's results change when key assumptions are made more realistic. This book provides a wide-ranging introduction to research on urban residential structure. Topics covered range from theoretical analysis of urban structure with different transportation systems or multiple worksites to empirical work on the impact of local public services on house values and the impact of racial prejudice and discrimination on housing choices. Graduate students and scholars who want to learn about research in urban economics will find this book to be a good starting point. Request Inspection Copy

The new Handbook of Regional and Urban Economics: Cities and Geography reviews, synthesizes and extends the key developments in urban and regional economics and their strong connection to other recent developments in modern economics. Of particular interest is the development of the new economic geography and its incorporation along with innovations in industrial organization, endogenous growth, network theory and applied econometrics into urban and regional economics. The chapters cover theoretical developments concerning the forces of agglomeration, the nature of neighborhoods and human capital externalities, the foundations of systems of cities, the development of local political institutions, regional agglomerations and regional growth. Such massive progress in understanding the theory behind urban and regional phenomenon is consistent with on-going progress in the field since the late 1960's. What is unprecedented are the developments on the empirical side: the development of a wide body of knowledge concerning the nature of urban externalities, city size distributions, urban sprawl, urban and regional trade, and regional convergence, as well as a body of knowledge on specific regions of the world—Europe, Asia and North America, both current and historical. The Handbook is a key reference piece for anyone wishing to understand the developments in the field.

A comprehensive update, the fourth edition of this leading text features numerous chapters by new authors addressing the latest trends and topics in the field. The book presents the foundational concepts and methodological tools that readers need in order to engage with today's pressing urban transportation policy issues. Coverage encompasses passenger and freight dynamics in the American metropolis; the local and regional transportation planning process; and questions related to public transit, land use, social equity and environmental justice, energy consumption, air pollution, transportation finance, sustainability, and more. Among the student-friendly features are special-topic boxes delving into key issues and 87 instructive figures, including eight color plates. New to This Edition

- *Extensively revised coverage of information and communication technologies, urban freight, travel behaviors, and regional transportation planning.
- *Engaging discussions of current topics: smartphone travel tracking, Uber, car and bike sharing, food deserts, biofuels, and more.
- *Heightened focus on climate change.
- *Reflects over a decade of policy changes, technological advances, and emergent ideas and findings in the field.
- *Most of the figures and special-topic boxes are new.

This text focuses on the introduction of economic principles to

provide an understanding of the commercial and residential property sectors and the markets for development, construction and occupation of property. Economics and Property supports students following property economics courses leading to a career in the property profession. Experience suggests that economics can initially be perceived as challenging; this book makes the subject clear and comprehensible. Extracts and examples from the Estates Gazette and its electronic archive EGi are used to provide examples and raise questions for discussion. Glossaries, key learning points and a clear layout make this book the best introduction to economics for the property profession.

This new text provides a rigorous analysis of real estate markets. Three main sections cover: microeconomics of property markets the macroeconomics of commercial property the financial economics of property Global empirical examples illustrate the theories and issues. This often complex area is made accessible: each chapter contains a boxed summary and questions for self-testing or discussion.

Spatial analysis assists theoretical understanding and empirical testing in the social sciences, and rapidly expanding applications of geographic information technologies have advanced the spatial data-

Acces PDF Urban Economics 4th Edition

gathering needed for spatial analysis and model making. This much-needed volume covers outstanding examples of spatial thinking in the social sciences, with each chapter showing some aspect of how certain social processes can be understood by analyzing their spatial context. The audience for this work is as trans-disciplinary as its authorship because it contains approaches and methodologies useful to geography, anthropology, history, political science, economics, criminology, sociology, and statistics.

Current economic thinking argues that the ability of cities to create wealth depends on agglomeration economies, relating to the geographic concentration of industries and people which interact to create enterprise, employment and growth. This book finds that the quality of local services significantly influences the productivity and economic development of a city and the ability of firms to contribute to wealth. The study is based on surveys conducted in five cities: Belo Horizonte in Brazil, Montreal in Canada, Puebla in Mexico, San Josâ in Costa Rica and San Salvador in El Salvador.
